LP500 LOW PROFILE PALLET WRAPPER

Stretchwrapping is the ideal, affordable way to secure and protect palletised loads ready for transportation. We produce a range of automatic and semi-automatic turntable and radial arm wrappers to suit all applications, with power stretch available to optimise consumable use and drive down cost.

The LP500 may be loaded by pallet truck due to the low profile turntable.

HP500 HIGH PROFILE PALLET WRAPPER

All the features of the LP500, but without the low profile base. Requires loading and unloading by a forklift truck.

PW67 AIRPORT LUGGAGE WRAPPER

Luggage and equipment transported by air often require extra protection for safety and security.

Orion supplies mains and battery powered portable stretchwrappers, wrapping anything from suitcases to boxes and wheelchairs. Airports in Australia, Kuwait, Portugal, Sweden and the UK have specified Orion equipment.

ARA 400 ROTARY ARM AUTO PALLET WRAPPER

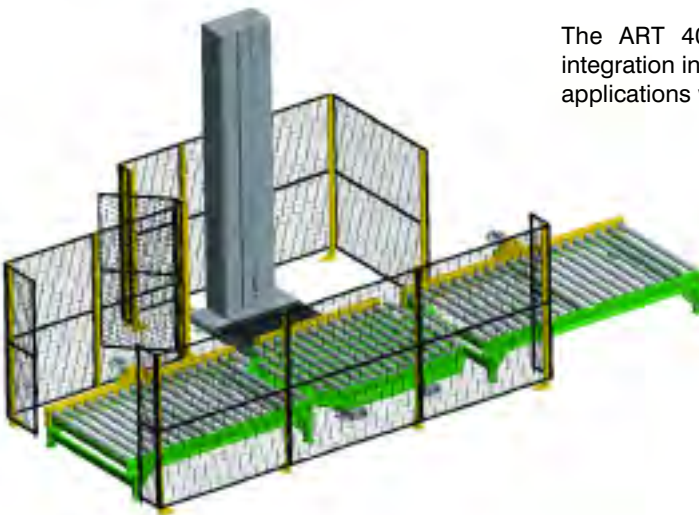

For heavy or unstable loads, or where faster throughput is required, we can supply a radial arm wrapper, with the load remaining stationary while the wrapping arm circles it.

Semi-Automatic: A semi-automatic machine is best for very unstable or heavy loads which cannot be taken up or down a ramp, and for loads of irregular sizes and shapes. It is also ideal for wet environments or those where regular washdown of the machine is required, for example in food production facilities.

Automatic: Capable of full integration into the production line or stand-alone operation, automatic radial arm wrappers can be fitted with integrated safety fencing an full light guard protection to ensure compliance with health and safety legislation.

ART 400 ROTARY TURNTABLE PALLET WRAPPER

The ART 400 Rotary Turntable pallet stretchwrapper allows for full integration into an automated line. The machine being suited to high speed applications where the number of operators is minimal.

ARN HORIZONTAL WRAPPER

For long, fragile or awkwardly shaped products, or items which need to be bundled, orbital wrapping is often the only solution. We supply a range of automatic and semi-automatic orbital wrappers which can accommodate products from 300mm to 2mm in diameter - and of unlimited length!

ARA 400 ROTARY ARM AUTO PALLET WRAPPER

Materials supplied in bulk on reels, such as paper, polythene and foam, require secure wrapping for protection before transport. We supply a range of reel wrapping machines with automatic and semi-automatic turntables, and also radial arm systems.

PALLET STACKERS/DESTACKERS

To compliment the Orion range of pallet wrapping equipment ancillary items such as pallet stackers/destackers can be supplied.

DOCK LEVELLERS

Hydraulic, robust dock levelling systems and lift tables. Bespoke designs for individual customer and application needs.
