

Case Study: Greencore Protective Screens

Project:

To manufacture and install protective screens for employees on 5 lines at Greencore Atherstone.

Our client, Greencore Group plc, a leading manufacturer of convenience foods, asked for a solution to social distancing requirements for their employees on 5 of their production lines at their site in Atherstone. We manufactured multiple screens with stainless steel frames and clear plastic sheeting to be placed along the lines. The screens allow employees along the lines to continue to work efficiently whilst staying protected.

We completed the order within a week to meet our client's requested timeframe and received very complimentary feedback from them. Our contact at the Greencore site wrote:

Just want to start by saying thanks to the Unitech team for all the hard work and late finish this morning. I arrived here at site at 5am to see the screens and I am blown away at how good they look and the quality is fantastic.
